**Hiring Team**  
**Pearson**

**Thursday, 01 May 2025**

Dear Hiring Team,

I'm excited to apply for the Senior Software Developer role at Pearson. With over 2 years of experience building scalable, responsive web applications, I specialize in React.js, Next.js, TypeScript, HTML, CSS, and Redux. I've worked across domains like E-commerce, Fintech, and SaaS, delivering user-centric, performance-optimized solutions in collaborative, agile teams.

At Cloudrevel Innovations, I've led development on dynamic UIs, authentication systems, and REST API integrations. My backend experience includes building secure services using Nest.js and managing data with MongoDB. I also actively explore and implement new technologies like Next.js for SSR/SEO, and I'm always eager to improve codebases with best practices, clean architecture, and performance tuning. I bring strong Git-based workflows, experience with Bitbucket and Jenkins, and a proactive approach to solving UX/UI and deployment challenges.

Pearson's mission to reimagine learning through technology deeply resonates with me. I'm enthusiastic about contributing to high-impact educational platforms while continuing to grow as a developer in a team that values innovation, learning, and excellence.

Thank you for considering my application.

**Best regards,**

**Nijine**
